

**Operative Excellence  
for OEMs, Suppliers  
and Logistics Providers**

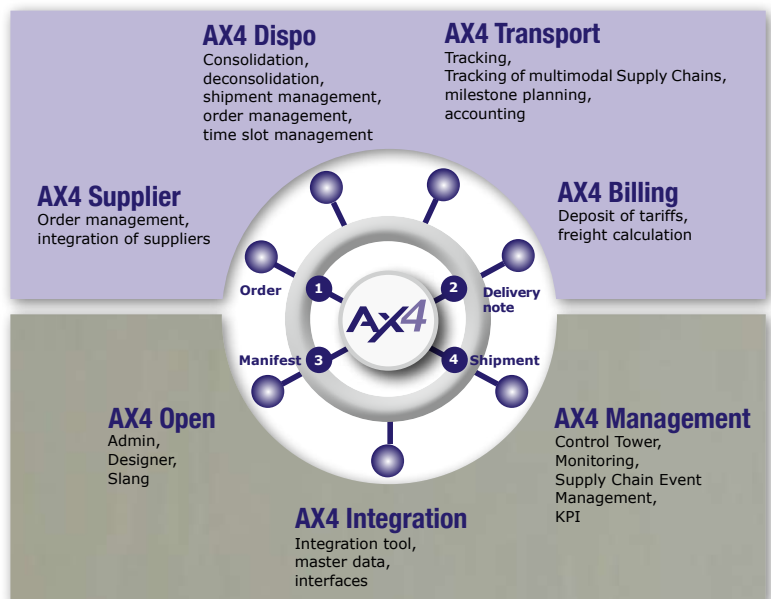

## Automotive Procurement Logistics – just-in-time with AX4 Automotive

The automotive industry is a just-in-time industry with globally networked production processes. It is dependent on precise and highly flexible logistics. AX4 Automotive is an SCM solution tailored to the automotive industry’s special requirements.

OEMs, suppliers and logistics providers optimize logistical processes using the central IT logistics platform AX4. A holistic integration of suppliers and logistics providers and the automation lead to the handling of delivery call-offs being speedier and more transparent.

AX4 Automotive offers special options along the entire supply chain:

- Straightforward and quick connection of suppliers and logistics providers
- Transmission of delivery call-offs based on automotive standards (VDA, Odette, etc.)
- Incoming goods processes on the consignee’s side are drastically simplified and automated
- Speedier handling of delivery call-offs

CROSS SECTION MODULES PROCESS MODULES

Supply Chain Management at the push of a button: With the logistics platform AX4 you use a fully developed, centrally available IT standard solution – with maximum security and easy tools for individualisation.

**AX4 Automotive is one of four industry solutions helping you to successfully manage your SCM workflows via the logistics platform AX4 – simply at a mouse click.**

## OPTIONS AND ADVANTAGES

One of the points that OEMs especially appreciate in AX4 Automotive is the straightforward and quick connection of suppliers and logistics providers; lead logistics providers can use the solution to offer their customers a fully integrated data and process concept.

### AX4 Automotive - Your Options

AX4 Automotive helps to automate and to drastically simplify incoming goods processes at the consignee's side.

- Delivery call-offs are transmitted based on automotive standards (VDA, Odette, etc.) .
- Suppliers create and return delivery orders via web or interface.
- Incoming goods labels can be created via AX4 to be attached to the goods.

Forwarders and lead logistics providers use the platform to view delivery call-offs at an early stage and thus to improve their transport planning.

- Generation of pick up sheets through AX4 for comparison with physically picked up goods (controlled pick up).
- Simple and multi-level transport processes are mapped in AX4 by the logistics providers and tracking data is stored. This makes the entire supply chain transparent and easily controllable.
- VMI (Vendor Managed Inventory) and Kanban processes are also integrated in AX4.

### AX4 Automotive - Your Advantages

- Time saving due to a high degree of automation and by avoiding effortful researches
- High profitability due to operative excellence
- Cost reduction due to continuous transparency
- Error prevention due to improved planability
- Speedier handling of delivery call-offs
- Simplified management of incoming goods
- Realisation of short projects
