

Operative excellence through simplified processes and seamless control.

INTEGRATION AND CONTROL

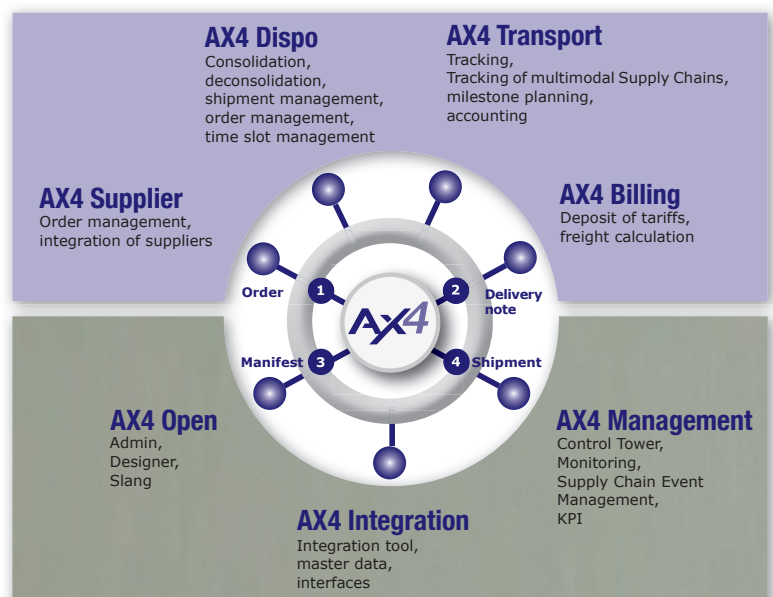

Seamless Management of Global Supply Chains – with AX4 Textile.

Due to its globally networked production systems the textile industry is dependent on flexible logistics solutions like hardly any other industry. AX4 Textile is a solution specifically tailored to this industry's special requirements.

Textile companies include manufacturers, sub-contracted manufacturers, refiners, forwarders and other partners in their logistical processes. The globally available solution AX4 textile ensures the necessary control and transparency of those complex processes – from order transmission to pick-up and on to container loading and delivery.

AX4 Textile offers special options along the entire supply chain:

- Exchange of shipment, tracking and billing data
- Flexible integration of all partners
- Straightforward and quick connection of suppliers and logistics providers
- Efficient processes with high profitability
- Mapping of all data levels of a textile order
- Consideration of heterogeneous supplier/manufacturer structures

CROSS SECTION MODULES PROCESS MODULES

Supply Chain Management at the push of a button: With the logistics platform AX4 you use a fully developed, centrally available IT standard solution – with maximum security and easy tools for individualisation.

AX4 Chemical is one of four industry solutions helping you to successfully manage your SCM workflows via the logistics platform AX4 – simply at a mouse click.

OPTIONS AND ADVANTAGES

AX4 Textile - Your Options

- AX4 Textile assumes a cockpit function. This ensures that the orderer and his lead logistics provider alike are able to retrieve the supply chain's updated status and to take corrective action, at any time and from any place.
- Industry specialists particularly appreciate the straightforward and quick connection of suppliers and logistics providers. Each one can exchange data easily over the internet with numerous business partners and map processes and workflows across companies.
- Due to its multilingual abilities AX4 supports the strong international orientation of the garments industry and it supports the comprehensive data levels of a textile order (consideration of colours, sizes, design keys, information on sample and quality management etc.): orderers send order data to suppliers via AX4. These, in turn, can confirm, report amendments and create delivery orders.
- Logistics providers create pick-up orders based on the delivery orders. For the transports tracking data is transferred to the orderer. AX4's supply chain event management monitors the entire textile process chain, i.e. it warns the parties involved before problems escalate.

AX4 Textile - Your Advantages

- Time saving due to a high degree of automation and effortful researches being avoided
- Cost saving due to operative excellence
- Cost reduction due to continuous transparency
- Avoid errors due to improved planability
